Projects

► **Online Voting System:**

Description: This system designing for online voting. It is a system which will provide online registration form for the user before voting. The system we develop with security and user friendly. The scope of the project is that it will use the ID and Password created by user to register him/her in the voting site, through this all the details of voters are saved in database.

► **IOT BASED Smart Sugarcane Crop: Soil Nutrient and Leaf disease by Using Image Processing:**

Smart Sugarcane Crop Growth Monitoring System Based on IOT

Agriculture is the major source of income for the largest population in India and is major contributor to Indian economy. Though there is a large area under sugarcane cultivation, we don't get maximum yield.

To design an intelligent system which can sense the various parameters in soil and environment for better growth of crop.

In IOT- based smart farming, a system is built for monitoring the crop filed with the help of sensors (soil Moisture, PH Sensor).
